projects

Dynamic JavaScript

Fall 2019

Coding Project

Created a dynamic website using automatically-updated form elements given data sets and user input. Use of DHTML, JS, and CSS animations to abstract the website for use with any given data set.

Supplemental Instruction

Spring 2018

App Prototype

Redesigned an existing application for a program at RIT, Supplemental Instruction at RIT. Project aimed to help define the functional requirements of the application and create a central platform for the community to use.

experience

Web Application Developer

Summer 2019

RecordsOne

Updated existing integration tests using the web languages for the RecordsOne platform. Worked with other developers to maintain R1 software's code base and ensure new tests met coding standards.

Web Framework Developer

Summer 2018

RIT MAGIC Spell Studios

Updated and improved the Molly framework used for web development. Made interface responsive and mobile-first in templates and cleaned code base for documentation.

education
